### > On Demand Microsoft EPM

- Quick to Deploy
- Very Flexible
- Highly Reliable
- Cost Effective
- Extremely Secure

### > On Demand EPM Services

- Online Tours
- POC Trials
- Interim Hosting
- Long-Term Hosting

### ▶ Microsoft EPM

On demand Microsoft Enterprise Project Management (EPM) services from Project Hosts allow your organization to rollout the application faster with higher reliability, performance, and security than typically experienced with onsite deployments. Our on demand EPM services including Online Tours, 30 day Trials, Interim Hosting, and Long-Term Hosting can assist you at any point during your evaluation and deployment process.

### ▶ Quick to Deploy

We typically deploy on demand Microsoft EPM environments in 5 to 10 business days using infrastructure that supports hundreds of shared and dedicated EPM environments for customers worldwide. Our extensive experience deploying EPM for over 20,000 users means we know how to avoid the common hurdles that delay a smooth rollout. Your organization can leverage our infrastructure and experience to short cut the deployment process and avoid the two month or longer delay typically required for in-house IT departments to purchase and install the hardware and software required to deploy Microsoft EPM.

### ▶ Very Flexible

Our on demand Microsoft EPM environments do not lock you in to an on demand deployment. Flexible contracts, including month-to-month terms, provide you with the choice of migrating your environment onsite at any time. Whether we host your EPM long-term or only on an interim basis, you retain full ownership of your data and can download and deploy it onsite at any time.

You also have the flexibility to supply some or all of the required Microsoft licenses or rent them from Project Hosts. You can also add or delete users at any time with monthly billing adjustments that reflect the changes.

### ▶ Highly Reliable

Microsoft EPM employs a wide variety of Microsoft technologies and your IT department may not have the in-house experience to support its deployment or maintenance. Our accumulated experience and extensive EPM infrastructure can allow your organization to experience higher reliability and system uptime than is possible when deploying in-house.

We apply the experience gained across dozens of customer deployments and over 20,000 users to optimize and tune the performance of all the environments we provide. Standby replacements for all hardware in our data centers allow for rapid recovery in the event of a hardware failure. All of our environments are hosted in Tier-1 data centers with multiple levels of redundancy against data center failures, also.

### ▶ Cost Effective

On demand Microsoft EPM reduces the upfront cost of deploying an EPM solution and results in a shorter payback period and higher ROI. We reduce the upfront cost by providing the server infrastructure and, optionally, the required software licenses. We also eliminate the delays and IT costs of deploying servers to support your Microsoft solution, allowing your organization to focus on project management without worrying about the underlying IT infrastructure.

### ▶ Extremely Secure

We utilize seven layers of physical, network, and application data security to keep your data safe and available. Our phased onsite and offsite data backup procedures prevent significant data loss even in the case of a catastrophic system failure and rapid data restore is available in case of data loss or corruption.

### ▶ EPM Services

We provide services that can benefit your organization throughout the evaluation and deployment process.

Services	Benefits
Online Tours	Try the Microsoft EPM solution online for free. Follow one of nine scripted product tours or go offroad and explore the solution on your own.
POC Trials	Deploy the Microsoft EPM solution for 30 to 60 days with up to 25 users. Evaluate its benefits for your organization using your project data before making a purchase decision.
Interim Hosting	Launch your Microsoft EPM environment in weeks, not months. Move your environment in-house once your IT group is ready to deploy and maintain the solution.
Long-Term Hosting	Outsource your Microsoft EPM IT requirements to reduce costs and increase reliability, performance, and security. Leverage the combined experience Project Hosts has developed across hundreds of EPM environments and more than 20,000 users worldwide.

#### > On Demand EPM, CRM and SharePoint Advantages

- Faster Deployments
- Enhanced Reliability
- Improved Scalability
- More Flexibility
- Improved ROI
