Case Study:
Distributed Solutions, Inc

As an ISV, DSI had a direct need from an agency for their AEON SaaS to be FedRAMP compliant. Project Hosts was able to assist them in a timely and more cost-effective manner.

Challenge:
Migrate DSI's AEON Software as a Service (SaaS) to Project Hosts Federal Private Cloud (FPC) Platform as a Service (PaaS) on Microsoft Azure Government

Solution:
Project Hosts' FedRAMP Compliant Azure Security Envelope. DSI needs their AEON SaaS to be FedRAMP Compliant. To do this, DSI worked with Project Hosts to leverage their FedRAMP Authorized Federal Private Cloud General Support System built on Microsoft Azure Government Services. DSI also utilizes SaaS services Project Hosts provide to their customers above the PaaS level.

Results:
With assistance from Project Hosts, DSI has successfully completed a FedRAMP Assessment by a third-party qualified assessment organization who recommended them for FedRAMP authorization. They also received an ATO at the SaaS level from an agency Authorizing Official and are now FedRAMP validated.

Project Hosts also provides services to DSI that are over and above the PaaS offering described in the FPC FedRAMP package. Namely, Project Hosts deploys, secures, manages, and provides continuous monitoring of the AEON SaaS application, which is compatible with FPC architecture, authentication, operating system, database, and access requirements. Project Hosts works with DSI to provide their SaaS-level FedRAMP package, supporting them throughout the agency authorization process, and manages their 3PAO annual assessments.

About Distributed Solutions, Inc.:

For over 25 years, Distributed Solutions, Inc. (DSI) has transformed the way their customers do business by successfully implementing innovative software solutions built on their powerful AEON™ platform. AEON solutions integrate with other business systems data, intelligently automate business processes, and provide greater management control and visibility across all business process areas. This enables DSI customers to work more efficiently and with fewer risks. Coupled with their highly experienced team of consultants, AEON and DSI subject matter experts create automated, knowledge-enabled solutions that deliver results.

About Project Hosts:

Project Hosts is a cloud solutions provider (CSP) and a managed services partner (MSP) that specializes in securing applications on Microsoft Azure and ensuring compliance with regulatory standards, including HIPAA, HITRUST, ISO 27001, FedRAMP, DoD IL 5. Project Hosts' comprehensive set of Azure managed services extend compliance beyond the infrastructure (IaaS) and platform (PaaS) level to protect entire applications at the Software (SaaS) level, implementing controls related to access, authentication, encryption, auditing, scanning, business continuity, change management, incident response, privacy, annual assessment, penetration testing, and required documentation.

Healthcare organizations, federal, state, and local government agencies, and enterprises rely on Project Hosts to ensure they have a cloud solution that meets their business needs, their budget, and most importantly, protects their business, employee, customer, and patient data from unauthorized access or theft. Their FedRAMP Compliant Cloud Solutions enable ISVs/Agencies to deliver their Windows and Linux apps as a FedRAMP SaaS-level authorized cloud service at the Moderate, High and IL5 level, much faster, and more affordably than doing it on their own.
