Since its founding in 2002, Relocation Management Worldwide (RMW) has provided best-in-class professional employee relocation management services to both government agencies and commercial enterprises.

Challenge:

In 2018, the US Department of Interior (DOI) asked RMW to obtain a FedRAMP authorization for its Virtual Employee Network (VEN) cloud solution and agreed to be VEN's agency sponsor.

Solution:

RMW turned to Project Hosts.
Project Hosts' turnkey service for FedRAMP authorization included both managing the VEN cloud solution on Microsoft Azure and also shepherding the solution through the complex FedRAMP authorization process. The process started by writing the full SSP and attachments in a form that totally satisfied DOI security assessors: "This is the best SSP that I have seen for a cloud solution." The next step was audit preparation. Since Project Hosts manages more than a dozen cybersecurity audits every year, the evidence generated for the auditors was exactly what the 3PAO was looking for. Project Hosts took the 3PAO's glowing Security Assessment Report (SAR) through the DOI ATO process and FedRAMP validation. The FedRAMP PMO assessors remarked that RMW's was the fastest FedRAMP validation they had done to date. Six months after signing the deal with Project Hosts, RMW's VEN solution was listed on FedRAMP.gov as an Authorized Product.

Results:

Project Hosts took the 3PAO's glowing Security Assessment Report (SAR) through the DOI ATO process and FedRAMP validation. The FedRAMP PMO assessors remarked that RMW's was the fastest FedRAMP validation they had done to date. Six months after signing the deal with Project Hosts, RMW's VEN solution was listed on FedRAMP.gov as an Authorized Product.

"I am really happy with our decision to engage Project Hosts," said Al Watson, CEO of RMW. "By allowing them to manage our FedRAMP compliance and all of the complex processes, evidence and documentation that go with it, our people are able to focus on what is really important – continually improving VEN to ensure that it remains the best solution for employee relocation on the market today."

About Relocation Management Worldwide:

Relocation Management Worldwide Incorporated (RMW) was founded in 2002. At that time, RMW established a market penetration strategy built on a single core competency; transportation management. RMW has since added mobility solutions to more fully enhance the user relocation experience. By providing comprehensive solutions for a total global workforce, RMW renders a greater service value to every customer. Being fully independent has allowed RMW to develop a custom relocation management software solution to execute and deliver the most advanced service and technology available. RMW successfully implements this solution every day for both public and private sector clients.

About Project Hosts:

Project Hosts is a cloud solutions provider (CSP) and a managed services partner (MSP) that specializes in securing applications on Microsoft Azure and ensuring compliance with regulatory standards, including HIPAA, HITRUST, ISO 27001, FedRAMP, FedRAMP DoD IL 5. Project Hosts comprehensive set of Azure managed services extend compliance beyond the infrastructure (IaaS) and platform (PaaS) level to protect entire applications at the Software (SaaS) level, implementing controls related to access, authentication, encryption, auditing, scanning, business continuity, change management, incident response, privacy, annual assessment, penetration testing, and required documentation.

Federal, state, and local government agencies, and enterprises rely on Project Hosts to ensure they have a cloud solution that meets their business needs, their budget, and most importantly, protects their business, employee, customer, and patient data from unauthorized access or theft. Their Healthcare Compliant Azure Security Envelope speeds and simplifies the job of moving on-premises healthcare workloads into the cloud. The ready-to-deploy Security Container supports Windows and Linux apps with full software compliance.
