

Case Study:

MMM Healthcare

MMM Healthcare of Puerto Rico is a healthcare provider who serves a large demographic of patients through Medicare and Medicaid.

Challenge:

Because they were working with a government agency, they needed an environment that is both HIPAA and FISMA compliant. In addition, they wanted to get Office365 and have single-sign-on (SSO) implemented.

Solution:

Our solution was simple, yet complex. We utilized Azure Gov and helped them by building an RDP solution that employed 14 controls above the Azure level in our HIPAA/HITRUST and FedRAMP Compliant security envelope. To achieve SSO we leveraged Active Directory Federation Services in Azure. We were able to meet the stringent compliance and security standards that were required for the project and provide the solutions that allowed the customer to meet their objectives within a few months.

Results:

Microsoft Azure AD configured to AD FS made SSO simplified and secured while allowing for easy authentication.

The HIPAA/HITRUST Azure Security Envelope extends Azure's built in IaaS and PaaS security compliance to include all software and data running in the cloud.

Microsoft and Project Hosts continued to work in harmony always updating one another about the status of the project. As we all know there were 2 hurricanes in Puerto Rico and this project knew ups and downs over the last few months.

About MMM Healthcare:

MMM Healthcare is the first Medicare Advantage plan established in the Island, characterized by offering access to the care that Medicare beneficiaries deserve for their wellbeing. We strive to achieve efficient coordination of services for comprehensive attention. We are the plan for your health. At Medicare y Mucho Más, as a pioneering plan in the industry, we offer coverage options to address the diverse health needs of Medicare and Medicaid beneficiaries. For over a decade and a half, we have occupied preferred places in the market and we have received important recognition from the healthcare industry in Puerto Rico and the United States.

About Project Hosts:

Project Hosts is a cloud solutions provider (CSP) and a managed services partner (MSP) that specializes in securing applications on Microsoft Azure and ensuring compliance with regulatory standards, including HIPAA, HITRUST, ISO 27001, FedRAMP, DoD IL 5. Project Hosts' comprehensive set of Azure managed services extend compliance beyond the infrastructure (IaaS) and platform (PaaS) level to protect entire applications at the Software (SaaS) level, implementing controls related to access, authentication, encryption, auditing, scanning, business continuity, change management, incident response, privacy, annual assessment, penetration testing, and required documentation.

Healthcare organizations, federal, state, and local government agencies, and enterprises rely on Project Hosts to ensure they have a cloud solution that meets their business needs, their budget, and most importantly, protects their business, employee, customer, and patient data from unauthorized access or theft. Their FedRAMP Compliant Cloud Solutions enable ISVs/Agencies to deliver their Windows and Linux apps as a FedRAMP SaaS-level authorized cloud service at the Moderate, High and IL5 level, much faster, and more affordably than doing it on their own.
