

## Healthcare Compliant Azure, Customer Subscription

Project Hosts offers continuous monitoring services in the client's Azure subscription. This includes performance, security and access & application management. With our extensive experience in hosting and managing Windows and Linux applications in Azure, we work with you to ensure that all security and compliance controls are in place to provide a smooth path to HIPAA compliance and HITRUST certification in Microsoft Azure.

Project Hosts can perform the role of the HIPAA and HITRUST compliant organization, bringing our HITRUST-on-Azure expertise to bear. To do this, we are proposing an initial Discovery & Gap Assessment phase followed by three ongoing practices:

- Remediation & Documentation
- Ensure Continuing Compliance
- Guidance and Support through External Audits

### Specifics:

- **Discovery and Gap Assessment:**  
During the Discovery and Gap Assessment phase, Project Hosts cloud engineers and compliance teams will evaluate your security and compliance controls implementation to identify gaps in your policies and procedures, if any.
- **Remediation & Documentation:**  
During this phase, Project Hosts Azure and security experts will work with your team to determine the best way to implement technical and process solutions that will fully close the gaps found in the Discovery phase.
- **Continuous Monitoring & Compliance Management**  
Project Hosts provides performance, security and compliance management above Microsoft Azure.
- **Guidance and Support through External Audits**  
Project Hosts will begin discussions with auditors, providing them with the information that they will need to quote their services. Project Hosts has working relationships with a collection of auditors.
